TABLE OF CONTENTS FOR
 "NONMETALLIC MATERIALS, THEIR PROCESSING AND APPLICATION"

N. V. Andreyev, V. G. Kalyuzhnyy,
 A. S. Konstantinov, M. P. Livshits,
 F. M. Manzhos, Ye. I. Savkov, P. P. Uspasskiy,
 A. Ya. Feygina, V. V. Chebotarevskiy,
 I. Yu. Sheydeman.

This book is accepted as a textbook for aviation institutes.

TABLE OF CONTENTS

Part 1. Wood materials, their processing and application

	Page
Introduction	7
Chapter 1.	
I. General information	9
II. Structure of wood	10
A. Macrostructure	
1. Basic sections	11
2. Pith	12
3. Bark	12

- 1 -

4. Cambium	12
5. Wood, core, sapwood	12
6. Annual rings	13
7. Cones of growth, tapering	14
8. Early and late wood	14
9. Location of vessels	15
10. Pitch passages	16
11. Pith rays	16
12. Pith recurrences	17
B. Microstructure	
1. Cell	17
2. Classification of cells	18
III. Defects of wood	19
1. Knots	19
2. Cracks	21
3. Mycologic affections	22
4. Damages by insects	23
5. Abnormal structures of wood	23
6. Abnormal shapes	25
7. Wounds	25
8. Abnormal deposits	25
IV. Physical properties	26
1. Moisture	26
2. Shrinkage on drying and swelling	28
3. Warping	31
4. Internal stresses and cracking	32
5. Weight	33
6. Electrical conductivity	35
7. Color	36
8. Sound	36
9. Odor	36

V. Mechanical properties	38
1. Compression	39
2. Shear	40
3. Tension	41
4. Static bending	42
5. Torsion	43
6. Split	43
7. Holding of nails and screws	44
8. Hardness	44
9. Wearability	44
10. Impact strength	45
11. Vibration loads	45
12. Modulus of elasticity	45
13. Numerical values of mechanical properties	45
14. Relation between mechanical properties of wood	49
VI. Factors affecting mechanical properties of wood	50
1. Volumetric weight	51
2. Content of summer wood	52
3. Number of annular rings	52
4. Moisture of wood	55
5. Direction of fiber	55
6. Location of wood in a trunk	56
7. Testing methods	56
8. Temperature	56
9. Impregnation of wood	57
10. Knots	57
11. Cracks	57
12. Mycologic damages of wood	58
13. Pitchiness and tapping of wood	58
14. Time of felling	58

- 3 -

	<u>Page</u>
VII. Acceptance and design coefficients and designation of wood varieties	58
1. Acceptance coefficients	61
2. Calculation coefficients	64
3. Specific strength and designation of wood	65
VIII. Lumbering, assortment and acceptance of wood materials	65
IX. Protective measures for wood	71
1. Protection against moistening and rotting	73
2. Protection of wood against fire	74
X. Veneer and plywood	80
XI. Delta-wood and balinite	80
Chapter 2. Drying and storage of wood	86
I. Moisture of wood and necessity for drying	87
II. Drying factors and their significance	88
III. Storage and air drying	90
1. Construction of storehouse	92
2. Piling	93
3. Receiving and inspection of materials	94
IV. Chamber drying	96
1. Classification of drying chambers	96
2. Types of chambers in use	99
3. Equipment of the VIAM chamber	101
4. Control-measuring instruments	102
5. Piling	106
6. Drying process	110
7. Control of air and material conditions	110
8. Drying periods	110
9. Organization of the drying shop	113
V. Storage of wood materials	114
1. Storage of dry wood	114
2. Storage of plywood and veneer	114

VI. Air conditioning	
Chapter 3. Processing of wood materials by cutting	
Theoretical fundamentals of wood cutting	
I. Method of mechanical processing of wood	119
II. Geometry of the cutter and chip	119
III. Elementary cutting of wood	121
1. Face cutting	123
2. Longitudinal cutting	125
3. Transverse cutting	126
4. Numerical values of specific resistance to cutting	127
5. Effect of angular elements of a cutter on the cutting process	128
6. Sharpness of a cutter and its effect on the cutting process	128
IV. Quality of cutting	129
V. Cutting with cutter blades smaller than the width of work-piece	131
Wood-working machines, tools and working processes	132
I. Sawing	
1. Description of the sawing process	134
2. Circular saws	137
3. Circular sawing machines	139
4. Band saws	148
5. Band sawing machines	149
6. Scroll saws	151
II. Milling and planing with rotating cutters	
1. Characteristic of the milling process	152
2. Planing tools	155
3. Planing machines	157
4. Milling tools	162
5. Milling machines	164

III. Drilling	169
IV. Turning	170
V. Grinding	172
Manual wood-working tools and devices	
I. Manual tools for cutting	
1. Sawing tools	174
2. Cross cutting hand tools	175
3. Manual planing tools	175
4. Hand drills	177
5. Slotting tools	177
6. Manual tools for surface finishing	178
II. Mechanized hand tools	
1. Electric handsaws	180
2. Electric planes	180
3. Electric drills	181
4. Electric grinder	181
5. Mechanized hand tools with flexible transmission	182
6. Pneumatic hand tools	183
III. Measuring instruments	183
IV. Marking tools	183
V. Tools for metal joints	184
Chapter 4. Devices for cutting wood materials in the manufacture of aircraft parts	
Characteristic and classification of devices	185
I. Devices for sawing	
1. Mitre box	186
2. Guide rule with rest	187
3. Device for cutting miters	188
II. Devices for planing	
1. Profiling master form for planing surfaces with varying slope	188
2. Profiling master form for machining curvilinear surfaces on a horizontal planing machine	189

3. Master form for sloping with grain on the horizontal plaver	190
4. Master form for chamfering	190
5. Master form for sloping curvilinear workpieces	191
III. Devices for milling	
1. Devices for milling along the rest ring	192
2. Devices for milling along the rest rule	197
IV. Devices for drilling	
1. Portable jigs for drilling wing spars	202
2. Stationary jig for drilling wing spars	204
Chapter 5. Technology of joining wood materials	
I. General characteristic of joints	205
II. Glued joints of wood materials	206
III. Materials used for gluing, and their preparation	
1. Quality of joints with various glues	210
2. Quality of material to be glued and preparing the surface for gluing	210
3. Preparing the glue solution	211
IV. Process of gluing	214
1. Holding before joining	216
2. Pressing	217
3. Pressing with heating	219
4. Holding of glued parts before machining	223
V. Equipment for pressing	
1. Pneumatic and hydraulic presses	224
2. Screw presses	226
3. Presses with wedge clamping	227
4. Portable clamps	227
5. Pressing with nails	229
VI. Quality control of the gluing process	
1. Forms of control	229
2. Defects of gluing	230

VII. Safety technique in gluing	231
VIII. Nails and wood screw joints	231
1. Nail joints	232
2. Wood screw joints	233
IX. Bolt and rivet joints	234
1. Bolt joints	234
2. Riveting	234
Chapter 6. Bending parts made of wood materials	
I. Wood bending	236
1. Material and its preparation	237
2. Method of cold bending	239
3. Method of hot bending	239
II. Bending of plywood	242
1. Bending of plywood in cold state	243
2. Bending of wood with boiling	244
III. Bending of delta-wood	244
Bibliography for chapters 1-6.	
Part 2. Plastic, gluing, paper, textile, lacquer-paint and rubber materials, their processing and application	
Chapter 7. Plastic materials	
I. Definition of plastic materials	249
II. Fundamental properties of plastics	250
III. Composition and classification of plastics	251
1. Binding agents	252
2. Fillers	267
3. Plasticizers	271
4. Dyes	271
IV. Technology of plastic products	271
1. Technology of cast plastic products	272
2. Preparation of materials for pressing	274
3. Shaping of products	274

4. Presses and pressmolds	275
5. Technology of pressed plastic products	278
6. Technology of manufacturing plastic products with pressure casting	280
7. Technology of extruding plastic products	281
8. Technology of manufacturing pipes of laminar plastics	282
9. Technology of manufacturing products made of ether-cellulose plastics	282
10. Shrinkage and fluidity of plastics	283
11. Defects of plastic products	283
V. Physicomechanical properties of plastics	284
VI. Classification of plastics and their application in airplane construction	287
1. Plastics of high strength	288
2. Low-strength plastics	300
Chapter 8. Gluing materials	
I. General definition of gluing materials	313
II. Aircraft glues, their technology and application	
1. Albumin glues	313
2. Rosin glues	315
3. Carbinol glues	318
Chapter 9. Working the plastic materials in airplane construction	
I. Technological characteristic of plastics, equipment and tools for their processing	320
II. Mechanical working of textolite and "getinaks"	321
1. Cutting of textolite and "getinaks"	322
2. Pressure bending and pressure drawing	325
3. Joining of textolite and "getinaks"	325
III. Working of glass-textolite	326
IV. Working of plexiglass	
1. Marking	329
2. Cutting	329
3. Shaping	333

4. Gluing	341
5. Finishing	342
V. Working of celluloid	
1. Cutting	342
2. Shaping	343
3. Gluing	343
Chapter 10.	
I. Basic information on paper and raw materials for its fabrication	344
II. Manufacture of paper and cardboard	345
III. Paper materials used in airplane construction	
1. Fiber	346
2. Long-fiber double-layer aviation paper	348
3. Packing cardboard	348
4. Cast paper materials	348
IV. Properties of paper materials and methods for their determination	349
Chapter 11. Working of paper materials	
I. Mechanical working of fiber	
1. Cutting	352
2. Shaping	352
3. Gluing	353
4. Joining with rivets	354
5. Painting	354
II. Technology of working cast paper products	
1. Cutting	354
2. Gluing	354
3. Painting	354
Chapter 12. Textile materials	
I. General properties of textile materials	
1. Raw materials	356
2. Cotton	359

3.. Flax	360
4.. Wool	360
5.. Asbestos	360
6.. Glass fiber	361
7.. Caprone	361
II. Fundamentals of manufacturing textile products and their principal properties	
1. Felt	362
2. Yarn	362
3. Twisted products	364
4. Cloth	364
5. Leather-substitutes	369
III. Standardization of textile materials and rules for their acceptance	370
IV. Textile materials in airplane construction	
1. Materials for outer covering	371
2. Heat-insulating and soundproofing materials	378
3. Case cloth and fabric	383
4. Cloth for protecting the wood covering of airplanes	384
Chapter 13. Technology of application of aviation textile materials	
I. Storage of textile materials	389
II. Cutting out of fabric	389
III. Machine and hand stitching	
1. Seam of covering panels	391
2. Hand stitching	392
IV. Covering the wings, fuselage and empennage with fabrics	
1. Preparation of framework and ribs	393
2. Covering the frames of wings and empennage with fabrics	394
3. Significance of preliminary tension of fabric	395

V. Methods of fastening the fabric cover to ribs	
1. General information	396
2. Methods of fastening	396
3. Stitching the panels along the edges of framework	402
4. Control of cover fastening	402
VI. Application of heat-insulating and soundproofing textile materials	
1. General information	403
2. Technological features of application of heat-insulating and soundproofing textile materials	406
Chapter 14. Varnish-paint materials	
I. Varnish-paint materials	
1. Oil varnishes	409
2. Oil-varnish base materials, enamels and fillers	414
II. Ether-cellulose materials	418
III. Perchlorvinyl materials	422
IV. Thinners, removers and polishing pastes	424
V. Aviation varnish-paint materials	425
VI. Basic properties of varnish-paint material and coatings and methods for their determination	
1. Basic properties of varnish-paint materials	428
2. Basic properties of films of varnish-paint coatings	430
Chapter 15. Technology of varnish-paint coatings	
I. Methods of applying varnish-paint materials and paint equipment	
1. Brush painting	434
2. Spray painting	435
3. Dip painting	435
4. Tools for hand work	436
5. Equipment for mechanized painting	438
6. Grinding-polishing devices	442

1. Painting of wood airplanes	452
2. Painting of fabric coverings	464
3. Painting of metal airplanes	468
4. Technological process of painting airplanes of mixed construction	473
Chapter 16. Rubber materials and products, their manufacture and application	
I. Fundamental information rubber and its components	
1. General information on rubber	476
2. Natural rubber	477
3. Synthetic rubber	478
4. Ingredients of rubber mixtures	479
II. Manufacture of rubber mixtures, semifinished products, cements and methods of manufacturing rubber goods	
1. Preparation of rubber mixtures	481
2. Calendering	484
3. Extrusion and pressing	484
4. Preparation of rubber cements	485
5. Spreading	486
6. Rubber articles constructed by hand	487
7. Shaped rubber goods	488
8. Pressure casting of rubber goods	489
9. Vulcanization of rubber goods	490
III. Basic properties of rubber and methods for their determination	493
